

SCIENTIFIC COMMUNICATION BETWEEN TWO CULTURES. Sheikha Moza bint Nasser, Chairperson of Qatar Foundation for Education, Science and Community Development and British Culture Minister, Ed Vaizey, were guest of honour at the launch of an eye-opening new exhibition at The Royal Society in London. Arabick Roots is a new display highlighting surprising connections between the scientific pioneers of Muslim Civilisation and seventeenth century Britain's greatest scholars and scientists. The exhibition displays rare books, scientific instruments and correspondence, showing how science and culture from the Muslim Civilisation influenced and inspired key figures such as Edmund Halley and Robert Boyle. Arabick Roots reveals the rich and often surprising history of scientific communication between two very different cultures. Photo courtesy of gulftimes.com
